No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                168

| TITLE OF INVENTION: Verom of Scorpions of the Genus Centruroides
| FILE REPRENCS: 2009-0070001
| CURRENT APPLICATION NUMBER: US/10/721,793
| CURRENT PLING DATE: 2003-11-26
| PRIOR PILING DATE: 2002-11-02
| NUMBER OF SEQ ID NOS: 294
| SEQ ID NO 163
| LENGTH: 198
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 13962, Application US/10424599
Publication No. US20040031072A1
GENERAL INFORMATION:
APPLICANT: La Rosa Thomas J
APPLICANT: Kovalic David K
APPLICANT: Zhou Yihua
APPLICANT: Cao Yongwei
APPLICANT: Cao Yongwei
TITLE OF INVENTION: Soy Nucleic Acid Molecules and Other Molecules Associated With
TITLE OF INVENTION: Plants and Uses Thereof for Plant Improvement
FILE REFERENCE: 38-21(53223)B

LOCATION: (5)..(265)
OTHER INFORMATION: Product= Sodium-channel modifier toxin precursor
OTHER INFORMATION: In the mature peptide, the last Cys is amidated, and the last Gly
OTHER INFORMATION: and the last 2 basic aminoacids are cut
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 PUBLICATION INFORMATION:

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Recombinant nucleic acid useful for diagnosis and treatment of carcinoma comprises a nucleotide sequence.

Claim 1; SEQ ID NO 997; Opp; English.

The present invention relates to novel DNA and protein sequences which are associated with carcinomas. The sequences are useful for: (i) for screening of bioactive agent capable of binding drug candidates, (ii) for screening of binding to Carcinoma Associated Protein (CAP), (iii) for screening of a bioactive agent capable of modulating the activity of CAP; (iv) for evaluating the effect of a candidate carcinoma drug; (v) for diagnosing carcinoma; (vii) for inhibiting the activity of CAP; (vii) for treating carcinoma; (viii) for neutralizing the effect of CAP; (vii) as a biochip; (x) for diagnosing carcinoma or a propensity to carcinoma; and (xi) for determining Carcinoma Associated (CA) gene copy number. In addition, the

                                                                                                                                                                                                                                                                                                                                                   ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             trarget (TAT) nucleic acid comprising: (a) any of 4622 nucleotide antigonic target (TAT) nucleic acid comprising: (a) any of 4622 nucleotide (a); (b) the full-length coding region of (a); (c) the complement of (a) or (b); (d) a sequence that has 80% equence identity to (a) - (c); or (b) = sequence that hybridises to (a) - (b). Also described: (1) an expression vector comprising the above nucleic acid; (2) a host cell comprising the above expression vector; (3) a process for producing a polypeptide; (4) an isolated polypeptide comprising: (a) an amino acid sequence encoded by any of the above comprising: (a) an amino acid sequence encoded by the full-length coding region of the above nucleotide sequences; (b) a sequence or comprising the above polypeptide fused to a hererologous polypeptide; (c) a sequence or comprising the above polypeptide fused to a hererologous polypeptide; (d) an isolated antibody that binds to the above polypeptide; (f) a process for producing the antibody; (8) an isolated onligoneptide; (7) a process for producing the antibody; (8) an isolated antipod comprising to the above polypeptide; (10) a cumposition of matter comprising to the above polypeptide; (10) a composition of matter contained within the container and the composition of matter contained within the container; (12) methods of
                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                             human; tumour-associated antigenic target; TAT; cytostatic; gene therapy; cancer; cell proliferative disorder; gene; ss.
                                                                       Sequence 143412 BP; 33078 A; 32311 C; 33212 G; 34277 T; 0 U; 10534 Other;
CA genes are useful as DNA vaccines and the CAP are useful as markers of carcinoma including lymphoma. The present sequence is one such CA coding sequence. Note: This patent is an equivalent to basic patent US2002182586A1, for which no sequence data was published
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes an isolated tumour-associated antigenic

inhibiting the growth of a cell that expresses the above protein, where the growth of the cell is at least in part dependent upon a growth of the cell is at least in part dependent upon a growth contrating effect of the above protein; (13) a method of the above protein; (14) a method of determining the presence of a protein in a sample suspected of containing the protein presence of a protein in a sample suspected of containing the protein companies. (15) methods of diagnosing the presence of a tumour in a mammal; (16) a method for treating or preventing a cell proliferative disorder associated with increased expression or activity of the above protein, and (17) a method of binding an antibody, oligopeptide or or organic molecule to a cell that expresses the protein described above. The TAT sequences have cytostatic activities, and can be used in gene therapy. The composition and methods are useful for diagnosing, preventing or treating cancer. The composition is also used for preparing a medicament for the therapeutic treatment or diagnostic detection of a medicament for the therapeutic treatment or diagnostic detection of a cell proliferative disorder or cancer. The present sequence represents a

                                                                                                                                                                                                                                                                                                                                                                                                                                                            g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                  This invention relates to a novel human MEGF7 polypeptide (a polypeptide having multiple epidermal growth factor-like domains, including an unidentified low density lipoprotein (LDL) receptor-like protein). The sequences of the invention may be useful for gene therapy or protein therapy or for the modulation of MEGF7 expression and activity. The invention may be useful for the development of methods to diagnose or treat diseases associated with inappropriate MEGF7 activity or levels. The polypeptides and polymucleotides are also useful for configuring screening methods for detecting the effect of added compounds on the production of mRNA and polypeptide in cells. The polymucleotides are also useful as diagnostic reagents, through detecting mutations in the useful as diagnostic reagents, through detecting mutations in the associated gene. The polymucleotide sequence is useful for chromosome localisation studies and tissue expression studies. The present sequence is that of a cDNA sequence which is related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel isolated human MEGF7 polypeptide, a polypeptide having multiple epidermal growth factor-like domains, useful in diagnostic assays for detecting diseases associated with inappropriate MEGF7 activity or

```

This invention relates to a novel human MEGF7 polypeptide (a polypeptide having multiple epidermal growth factor-like domains, including an unidentified low density lipoprotein (LDL) receptor-like protein). The sequences of the invention may be useful for gene therapy or protein therapy or for the modulation of MEGF7 expression and activity. The invention may be useful for the development of methods to diagnose or treat diseases associated with inappropriate MEGF7 activity or levels.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to novel isolated polynucleotides or a sequence encoding a polypeptide with biological activity, where the polynucleotide under stringent hybridization conditions or has greater than 99% sequence identity with the polynucleotide. The polynucleotides are useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders and other traits, to assess biodiversity, as nutritional sources or supplements. The polynucleotides may also be used as molecular weight markers, chromosome markers or map related gene positions, or as an antigen to raise anti-DNA antibodies or elicit immune response. The polypeptides are useful for raising antibodies, as markers for tissues in which the corresponding polypeptide is expressed, for re-engineering
The polypeptides and polynucleotides are also useful for configuring screening methods for detecting the effect of added compounds on the production of mRNA and polypeptide in cells. The polynucleotides are also useful as diagnostic reagents, through detecting mutations in the associated gene. The polynucleotide sequence is useful for chromosome localisation studies and tissue expression studies. The present sequence is that of a DNA sequence which is related to the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           New polynucleotides and secreted proteins, useful for treating myeloid or lymphoid cell disorders, in bone cartilage, tendon, ligament and nerve tissue growth or regeneration, in wound healing, and in tissue repair and

creating transpants animals userul for Brudying the in vivo activities or the polypeptide as well as for studying modulators of the polypeptides.

(I) induces the proliferation of neural cells and regeneration of nerve and brain tissue and is useful for the treatment of central and parkinson's disease, Huntington's disease, and amyotrophic lateral parkinson's disease, Huntington's disease, and amyotrophic lateral cortivity, regulation of haematopoiesis and is useful for treating myeloid or lymphoid cell disorders, platelet disorders such as thrombocytopenia and for regeneration of bone, cartilage, tendon, ligament and/or nerve tissue growth, and in tissue repair, healing of burns, incisions, ulcers, for treating osteoporosis, osteoarthritis, bone degenerative disorders, cor periodontal disease. Furthermore, (1) is also useful for gut protection or regeneration and treatment of lung or liver fibrosis, creperfusion injury in various tissues, various immune deficiencies and disorders including severe combined immunodeficiency (SCID), bacterial or reperfusion injury in various tissues, or ultiple solarosis, creations, autohmuned sesorders e.g. multiple solarosis, creations, autohmuned sesorders e.g. multiple solarosis, creations and conditions, such as asthma or other respiratory problems.

Creations and conditions, such as asthma or other respiratory problems.

Creations and conditions, catabolism, catabolism, storage or elimination of dietary fat, lipid, protein, carbohydrate, vitamins, minerals, provides atalgeary effects or other pain reducing effects, immunoglobulin like activity and can act as an antigen in a vaccine composition to raise an immune response. Ass44520-As455295 represent novel human secreted protein caning sequences of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö

The proteins and coding sequences are useful for preventing or treating disorders or syndromes e.g. atherosclerosis hypertension, obesity or cancer. NOV25 is a MEGF7-like protein and its coding sequence maps to chromosome 11.

```

```
This invention relates to a novel human MEGF7 polypeptide (a polypeptide having multiple epidermal growth factor-like domains, including an unidentified low density lipoprotein (LDL) receptor-like protein). The sequences of the invention may be useful for gene therapy or protein therapy or for the modulation of MEGF7 expression and activity. The invention may be useful for the development of methods to diagnose or tract diseases associated with inappropriate MEGF7 activity or levels. The polypeptides and polymucleotides are also useful for configuring screening methods for detecting the effect of added compounds on the production of mRNA and polypeptide in cells. The polymucleotides are also useful as diagnostic reagents, through detecting mutations in the associated gene. The polymucleotide sequence is useful for chromosome localisation studies and tissue expression studies. The present sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  localisation studies and tissue expression studies. The present sequence is the gene which encodes the human MEGF7 protein of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Gaps

                                                                                                                                                                                                The invention relates to novel polynucleotide and polypeptides for treating psoriasis or a sequence having at least 80% identity to the above sequences. The nucleic acid is useful for preparing a composition for diagnosing or treating psoriasis in a mammal. This sequence corresponds to one of the polynucleotides of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Early detection of soft tissue sarcoma comprises determining expression of a gene in a first soft tissue sample and a normal soft tissue sample and comparing the gene expression, also useful in treating soft tissue
                                                                                          Wood WI;

The invention relates to a novel method for detecting soft tissue sarcoma which comprises obtaining a first soft tissue sample from an individual and a normal soft tissue sample from the same or different individual, determining the expression of a gene in both samples and comparing the expression of the gene in both soft tissue samples, where a higher level of protein expression in the first soft tissue sample indicates the presence of soft tissue sarcoma. The method of the invention has cytostatic applications and may be useful for detecting soft tissue sarcoma, possibly via gene therapy or vaccine production. The nucleic acid sequences may be useful in diagnostic and screening applications. The current sequence is that of a human soft tissue sarcoma upregulated DNA of the invention. The current sequence is not shown within the specification per se but was submitted in.CD format by the inventor.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ς.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human; secreted protein; arthritis; Crohn's disease; sepsis; shock; ischaemia-reperfusion injury; haematopoiesis; cancer; neuropathy; transgenic animal; Alzheimer's disease; Parkinson's disease; burn; amyotrophic lateral sclerosis; platelet disorder; thrombocytopenia; ulcer; osteoporosis; bone degenerative disorder; thrombocytopenia; ulcer; osteoporosis; bone degenerative disorder; periodontal disease; gut protection; lung; liver fibrosis; immune deficiency; infection; severe combined immunodeficiency; SCID; autoimmune disorder; allergy; multiple sclerosis; theumatoid arthritis; diabetes mellitus; asthma; fertility; analgesic; pain; antigen; ss.

the intramatory conditions such as arthritis, nephritis, Crohn's disease, ischaemia-treperfusion injury, shock, sepsis, immune responses, and is involved in increasing haematopoiesis, stem cell survival, bone growth can demodaling. (I), (II) and modulators of (II) are useful for trophylaxis or treatment of one or more cancers. (II) is also useful for creating transgenic animals useful for studying the in vivo activities of the polypeptide as well as for studying modulators of the polypeptides of the proliferation of neural cells and regeneration of nerve and brain tissue and is useful for the treatment of central and praintissue and is useful for the treatment of central and praintissue and is useful for the treatment of central and praintissues, Huntington's disease, and amyotrophic lateral corrects. In addition, (I) is involved in chemotactic or chemokinetic corrections. In addition, (I) is involved in chemotactic or chemokinetic correction of haematopoiesis and is useful for treating myeloid correction of bone, cartilage, tendon, ligament and/or nerve tissue growth, and in tissue repair, healing of burns, incisions, ulcers, or periodontal disease. Furthermore, (I) is also useful for gut protection or regeneration and treatment of lung or liver fibrosis, or periodontal disease. Furthermore, (I) is also useful for gut protection or regeneration and treatment of lung or liver fibrosis, creperfusion injury in various tissues, various immune deficiency (SCID), bacterial or fungal infections, autoimmune disorders e.g. multiple sclerosis, creations and conditions, such as asthma or other respiratory problems. Creatility, metabolism, catabolism, anabolism, storage or elimination of disease disease. Addition, (I) affects biorhythms or circadian cycles of rhythms. Creatility, and can act as an antigen in a vaccine composition to raise an antigen in a vaccine composition to valse an antigen in a screet prover.
                                                                                                                      The invention relates to novel isolated human secreted polypeptides (I)
                                                                                                                                                                        and polynucleotides (II). (I) and (II) are useful for treating inflammatory conditions such as arthritis, nephritis, Crohn's disease,

```
This invention relates to a combination comprising several cDNAs that are differentially expressed in activated vascular tissue. The invention also discloses a high throughput method for detecting differentially expressed consists and any have antiarteriosclerotic; cytostatic; cardiant; hypotensive; antidiabetic; cytostatic; cardiant; hypotensive; antidiabetic; cytostatic; cardiant; hypotensive; antidiabetic; consists in sample, or screening several molecules or compounds to throughput methods for detecting differential expression of one or more consent in a sample, or screening several molecules or compounds to identify a molecule or compound that specifically binds a CDNA of the invention. A protein encoded by the CDNA may be used to screen several conferences or compounds to identify a ligand that specifically binds to the protein, or to produce or purify a ligand that specifically binds to the protein, or to produce or purify an antibody to the protein that can be used to detect a protein in a sample. The nucleotides may be useful for conference or protein from a sample. The nucleotides may be useful for diagnosing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, cancer, coronary artery conjury, restenosis, or stroke. The CDNAs can also be used for large-scale conjury, restenosis, or stroke. The CDNAs can also be used for large-scale conjury, restenosis, or stroke. The CDNAs can also be used for large-scale conjury, restenosis, or stroke. The cDNAs can also be used for large-scale conjury, restenosis, or stroke. The cDNAs can also be used for large-scale conjury, and antibodies to the proteins encoded by the cDNAs of the protein. The present sequence represente a cDNA of the invention confidention confidention and activated vascular tissue, Note: The sequence data for this parent did not form part of the specification, but and active discussed in a electronic form to the transfer and the protein confidence data for this parent did not form part of t
                                                                                                                                                                                                                                  Combination for diagnosing, staging, treating, or monitoring the progression of treatment of a vascular disease, e.g. atherosclerosis, comprises several cDNAs that are differentially expressed in activated

```
The present sequence is the nucleotide sequence of human lipid-associated molecule LIPAM-6 (Incyte polynucleotide 7510885CB1), which encodes a protein that shows sequence homology to chicken alpha-2-macroglobulin receptor. This is one of 19 LIPAM polynucleotides of the invention. The invention relates to novel LIPAMs and the nucleic acids encoding them, and to the use of novel LIPAMs and proteins in the diagnosis, treatment and prevention of disorders associated with abnormal expression or activity of LIPAM such as neurodegenerative disorders (e.g. myotonic activity of AlpaM such as neurodegenerative disorders (e.g. parkinson's disease), cafeers (e.g. leukaemia, cervical or breast cancers), cafeers (e.g. leukaemia, cervical or breast cancers), immunological disorders (e.g. scleroderma, systemic lupus erythematosus, allergies), gastrointestinal disorders (e.g. Crohn's disease), renal disorders (e.g. cleroderma, systemic lupus erythematosus, allergies), gastrointestinal disorders (e.g. Crohn's disease), renal disorders (e.g. acherosters), infections (e.g. viral, bacterial, fungal, parasitic, protozoal, helminthic), cardiovascular, compounds on the expression of nucleic acids and LIPAMs. The invention provides expression vectors, host cells, antibodies, agonists and arrays and microarrays of the polynucleotides.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New LIPAM polypeptides, useful for diagnosing, preventing, and treating disorders associated with abnormal expression or activity of LIPAM, e.g. neuromusculat, immunological, cardiovascular disorders, cancer and/or
                                                                                                                                                                                                                                                                                                                                                                                                                                  BA;

The present invention relates to LP (LP318a, LP318b, LP288, LP289, LP343, LP318b, LP319b, LP311, LP317, LP283, LP344, LP345 or LP346) proteins and polynucleorides encoding such proteins. Sequences of the invention are used to diagnose, treat or prevent cell proliferative disorders (e.g. actinic keratinosis, arteriosclerosis, psoriasis, leukaemia, lymphoma, melanoma, brain cancer or breast cancer), autoimmune or inflammatory disorders (e.g. ALDS (acquired immune deficiency syndrome), Addison's disease, allergies, ankylosing spondylitis, amyloidosis, anaemia, asthma, Crohn's disease, Goodpasture's syndrome, gout, Hashimoto's thyroiditis or Grave's disease), cardiovascular disorders (e.g. congestive heart failure, ischaemic heart disease, analma pectoris, myocardial infarction, atherosclerosis or hypertension), neurological disorders (e.g. stroke,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               New mammalian LP polynucleotides and proteins, useful in gene therapy, e.g. for treating or preventing cancers, autoimmune (e.g. AIDS), cardiovascular (e.g. myocardial infarction) or neurological (e.g. stroke)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Keleher GP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     , Chen D, Huang C, Keleher GP

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              The present invention provides a number of coding sequences and proteins, the over-expression of which is associated with ovarian carcinoma/cancer. These can be used in the diagnosis, treatment and prevention of ovarian cancer, optionally by gene therapy or in the form of a vaccine. The present sequence is an example of one of these sequences
Parkinson's disease or Alzheimer's disease) or developmental disorders (e.g. Down's syndrome or cerebral palsy). They are also used in gene therapy. The present sequence is human LP288 DNA
                                                                                                                                                                                                                                                                                                                    Gaps

NOTICE: This sequence may not represent the entire insert of this clone. It may be shorter because we only sequence overlapping clone sections once, or longer because we provide a small overlap between neighboring data submissions.

all regions were double stranded, sequenced with an alternate chemistry, or covered by high quality data (i.e., phred quality >= 30); an attempt was made to resolve all sequencing problems, such as compressions and repeats; all regions were covered by sequence from more than one subclone; and the assembly was confirmed by This sequence was finished as follows unless otherwise noted: restriction digest.

MAPPING INFORMATION:

Mapping information for this clone was provided by Dr. Wes Warren, Department of Genetics, Washington University, St. Louis MO. For additional information about the map position of this sequence, see http://genome.wustl.edu

SOURCE INFORMATION:

The MPCI-24 BAC Library has been constructed by Pieter de Jong and coworkers (http://www.chori.org) from male CSPBL/6J mouse spleen and/or brain genomic DNA. The clone and detailed information can be obtained from Pieter de Jong and coworkers at http://www.chori.org

NEIGHBORING SEQUENCE INFORMATION:
This sequence is the entire insert of the clone.

Direct Submission.

Submitted (10-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor plaza, Houston, TX 77030, USA.

On May 10, 2003 this sequence version replaced gi:25013050.

The sequence in this sequence version replaced gi:25013050.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft" sequence. It currently
consists of 2 contigs. The true order of the pieces
is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                              Direct Submission

Submitted (09-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 9, 2003 this sequence version replaced gi:24818504.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-seaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  * Nofe: Estimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a "working draft" sequence. It currently

* confaists of 1 contigs. Gaps between the contigs

* ard represented as runs of N. The order of the pieces

* is believed to be correct as given, however the sizes

* of the gaps between them are based on estimates that have

* provided by the submittor.

* This sequence will be replaced

* by the finished sequence as soon as it is available and

* the accession number will be preserved.

* The accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Direct Submission

Submitted (109-MAY-2003) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On May 9, 2003 this sequence version replaced gi:25188904.

The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table bellow represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence reads. Both end sequences and whole genome table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          * NOTE: Estimated insert size may differ from sequence length

* NOTE: This is a "working draft' sequence. It currently

* NOTE: This is a "working draft' sequence. It currently

* Cohists of 20 contigs. The true order of the pieces

* is, not known and their order in this sequence record is

* arbitrary. Gaps between the contigs are represented as

* runs of N, but the exact sizes of the gaps are unknown.

* This record will be updated with the finished sequence

* as soon as it is available and the accession number will

* be preserved.
                                                                                                                                                                                                                                                                                                                             Worley, K.C.

Stat Genome Sequencing Consortium.

Direct Submission

L. Submitted (19-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA

On Nov 6, 2002 this sequence version replaced gi:23812771.

The dequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas and whole genome shotgun sequencing reads assembled using Atlas in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig described in the feature contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequence and whole genome shotgun sequence reads. Both end sequence and whole genome shotgun sequence contigs will be indicated in the feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Center: Baylor College of Medicine

The Bequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Direct Submission

COMMENT

```
(see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).
NOTE: This is a "working draft' sequence. It currently consists of 1 contigs. Gaps between the contigs are represented as runs of N. The order of the pieces
may extend beyond the ends of the clone and there may be sequence contigs within a contig-scaffold that consist entirely of whole genome shotgun sequence reads. Both end sequences and whole genome shotgun sequence only contigs will be indicated in the feature table.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           HTG 16-NOV-1999
                                                                                                                                                                                                                                              NOTE: Estimated insert size may differ from sequence length

Submitted (20-NOV-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Housenon, TX 77030, USA TO NOV 20, 2002 this sequence version replaced gl:23908428. The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated hy sized gaps filled with Ns to the estimated size. The sequence may extend beyond the ends of the clone and there may be sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             * NOTE: Bstimated insert size may differ from sequence length

* (see http://www.hgsc.bcm.tmc.edu/docs/Genbank_draft_data.html).

* NOTE: This is a "working draft' sequence. It currently

* consists of 2 contigs. The true order of the pieces

* is not known and their order in this sequence record is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Submitted (16-APR-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA (bases 1 to 207871)

NOTE: This is a 'working draft' sequence. It currently consists of 18 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
Insert size: 185016; sum-of-contigs
